

Vehicle History

Retrace Routes to Check Efficiency and Investigate Incidents

The Vehicle History map allows you to play back a route history for a detailed understanding of travel and stops during the day.

Vehicle balloons show key details like stop location and speed during travel.

Control the time frame and use simple features to fast-forward, rewind or speed up the route playback.

Places

Easily Reference Key Locations with Custom Landmarks and GeoFences

Our Places tools recognize where your vehicles are in relation to your customers, suppliers and other important locations to better manage your fleet activities. You choose the names and locations of your custom places, and then you will see each place's friendly name in your maps, routes, alerts, reports and more.

GeoFences and Landmarks make key areas of Mobile Control more relevant to your daily operations.

- Create rectangular or circular GeoFences to match the location area you want to monitor.
- Replace addresses with your GeoFence friendly names in reports.
- Use GeoFences to generate alerts when a driver enters or exits a perimeter.
- Route with ease by choosing a GeoFence or Landmark as the starting or ending destination.

Organize Your Key Locations in Categories

Need to separate customer locations from employee homes? You categorize each set of places to organize your locations, and each GeoFence or Landmark will appear as a customizable color-coded shape or icon on the map.

Upload Your Addresses and Key Locations

Do you have a list of customer locations in an existing database? For your convenience, we can upload your list and automatically create GeoFences and Landmarks.
