

Mobile Control AVL/GPS from SageQuest

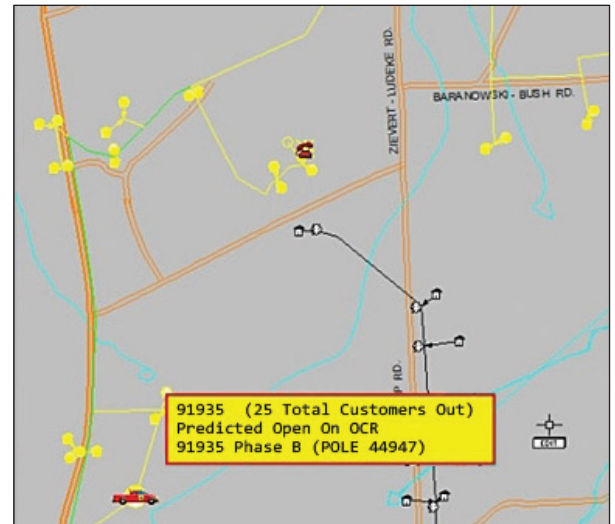

Reduce Outage Response Time with Enhanced Visibility

Mobile Control's integration with Milsoft's DisSPatch® puts your technician's real-time location on your outage management map to improve dispatching efficiency.

When your service and reputation is built on outage response, you need complete visibility to dispatch and manage crews effectively in real time.

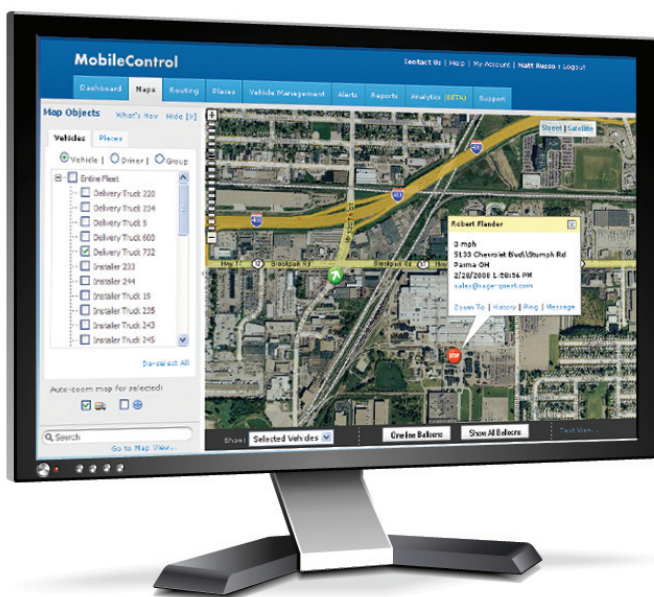

Mobile Control has achieved the MultiSpeak® certification for interoperability with Milsoft's Utility Solutions' DisSPatch® outage management system, which includes integrating real-time AVL information into the DisSPatch outage map. With field assets and crew locations on the same map, dispatchers and supervisors can more effectively manage response to any outage with the closest and more appropriate resources.

- Decrease outage response times
- Improve technician safety with anytime location
- Ensure maximum productivity from your crews in the field

Mobile Control Delivers Value Beyond Real-Time Location

Service quality is always the priority for any utility, but building quality service goes beyond real-time outage response. Mobile Control is a comprehensive vehicle tracking and management solution with deep value for your management and operations teams:

- Real-time alerts keep you aware of critical activity like vehicle idling, speeding and late starts that impact safety and reputation on the road
- Vehicle management tools help automate and track vehicle maintenance procedures
- Control Center helps executives and supervisors identify the biggest opportunities to improve workforce effectiveness at a glance
- Detailed and executive-level reporting ensures you can audit incidents as well as look at the big picture of workforce activity

Integrations with key workforce management applications and partners like Garmin also make Mobile Control the right choice to fit your back-office and deliver results in the field every day.
